

Shrink Chucks

HSK63

Edeco 40 year
**ANNIVERSARY
CELEBRATION**

April–October 2024

Optimized stability

through “Balanced by Design” and subsequent fine balancing

- Better surface quality
- Ideal for HPC/HSC processing
- Low wear of the machine spindle

Security

• All cylindrical shanks acc. to DIN1835 FORM A, B and E as well as DIN 6535 Form HA, HB and HE can be clamped

- No loss of clamping force on greasy and oily shanks.

The patented counterbore

allows insertion of the tool under cold conditions as well as an automatic shrinking process and simplified handling.

15–20% less heat required when heating the shrink chuck.

Longest tool life

and form stability due to the use of high heat resisting, special purpose steel

- High radial rigidity
- Low deflection
- High rate of infeeds possible

Highest concentricity

< 0,003 mm and precise taper tolerances, manufactured in an air-conditioned production area

- Reduced tool costs due to improved tool life, allows a constant cutting edge contact
- Reduced chatter marks

HSK63 / DIN69893
